ERBA

THE EXTRA QUALITIES OTHERS JUST DON'T HAVE

From the cooperation with the architect Giulio Manzoni, famous for his vast experience in the field of transformable products and the owner of about one hundred patents for his inventions, are created IQ and Tommi e Jerri. Erba introduces a new concept of wall bed where design and innovation are the real protagonists, offering more and more furnishing possibilities for the home and contract.

Design. In addition to absolute comfort and cutting-edge technology, IQ and Tommi e Jerri also offer a simple and elegant design. Tommi e Jerri is frameless. The fact that there are no frames, once Tommi e Jerri is open, makes it look just like a normal bunk bed, rather than a foldaway bed. IQ, unlike traditional systems

found on the market, it is more like wainscoting. Its lines, designed with horizontal panels, make it truly one-of-a-kind.

Innovation. These beds are equipped with the most innovative opening system found on the market. This system allows you to open the bed with a simple touch, making it perfect and easy for everyday use. It is also smooth and silent, and does not require assistance.

Safety. The opening mechanism is slow and smooth, and if any obstacles are present, it can be easily stopped with a simple touch.

Reliability. IQ and Tommi e Jerri are products created entirely within our premises, using only the most solid components and highest

quality materials. Each bed undergoes numerous careful checks before being delivered to the customer.

IQ, THE POWER OF A SYSTEM

IQ is available in vertical, IQ218, and horizontal, IQ128 and IQ164 and in three sizes: single bed, single large bed and double bed. Possibility to add a low bench that makes the bed freestanding. The low bench is not simply an accessory but a real strength of the system.

IQ with low bench, depth of 61,2 cm.

The perfect measurement to take advantage of the Erba system's potential. Our collections also offer a wide variety of storage units with a depth of 61,2 cm, to be paired up with your IQ that includes the low bench. Practicality and design finally come together in a single solution.

IQ with low bench, depth of 82,2 cm.

A low bench with an unusual

depth, but which gives IQ a special extra touch – the 82,2 cm low bench makes IQ a self-supporting bed that does not require wall-anchoring of the frame, but rather simply the minimum safety fastenings. For this reason IQ is perfect for apartments with gypsum board walls.

The low bench is equipped with a lift-down door, and in the rear part, with a top that opens to allow for the connection of electronics and cabling.

The IQ system beds can be added as single elements in any context, or perfectly integrated with other Erba collections, creating furnishing solutions for the living room, studio apartments, as well as

interiors for the young and old, where you need to make up for lack of space.

TOMMI E JERRI

The reason why Tommi e Jerri is the solid answer to your needs for more space can be found in the insightful choice of a designer bunk bed, with just 35 cm of depth, which stores two wonderfully comfortable beds. Tommi e Jerri is perfect for any interior and is part of a global furnishing system, specifically designed for situations where intelligent solutions make up for lack of space. Tommi e Jerri is frameless. This important technical feature makes it possible for those who use it on a daily basis to avoid

having upper or side obstructions, offering the feel of a traditional bed.

Also available in the model lower single bed and upper single bed, Tommi e Jerri, is designed to offer as much comfort as a traditional bed. It is not back-up solution – this is pure innovation. When you need to, the bed can be closed, taking up just 35 cm in depth, offering a vast array of possibilities to your project.

Tommi e Jerri with writing desk

Tommi e Jerri with writing desk is an intelligent project that allows you to add, to the upper bed, a large desk equipped with two side storage units. This is a tried and true island of study, work, and rest. During the day, the bed closes up, with an overall dimension of 35 cm, and the desk can also be used. When you want to open the bed, you don't need to even move anything from the work area.

A TECHNOLOGY THAT HAS NO RIVALS

With just a simple touch, all the beds of Erba collection smoothly rotate independently into the horizontal position.

Opening does not require any assistance and it can be quickly and easily blocked if there are any obstacles present.
